

High-Grade Multi-Commodity Exploration in Newfoundland

HM Exploration Investor Presentation | July 2026

CSE: HM | FSE: X5H | OTCQB: HMEXF

Investors are cautioned that, except for statements of historical fact, certain information contained in this document includes “forward-looking information”, with respect to a performance expectation for HM Exploration Corp. Such forward-looking statements are based on current expectations, estimates and projections formulated using assumptions believed to be reasonable and involving a number of risks and uncertainties which could cause actual results to differ materially from those anticipated.

Such factors include, without limitation, fluctuations in foreign exchange markets, the price of commodities in both the cash market and futures market, changes in legislation, taxation, controls and regulations of national and local governments and political and economic developments in Canada and other countries where HM Exploration Corp. carries-out or may carry-out business in the future, the availability of future business opportunities and the ability to successfully integrate acquisitions or operational difficulties related to technical activities of mining and reclamation, the speculative nature of exploration and development of mineral deposits located, including risks in obtaining necessary licences and permits, reducing the quantity or grade of reserves, adverse changes in credit ratings, and the challenge of title.

The Company does not undertake an obligation to update publicly or revise any forward-looking statements or information, whether as a result of new information, future events or otherwise, unless so required by applicable securities laws.

The technical portion of this presentation has been reviewed and approved by Nicholas Rodway, P.Geo, (License # 46541 and Permit to Practice #1000359) President and Chief Executive Officer of HM Exploration Corp., Mr. Rodway is a qualified person as defined under National Instrument 43-101.

Great Location For Discovery

Road-accessible, located ~25km east of Springdale, within an **established mining friendly district** that hosts the Buchans, Ming and Rambler past producing mines

Multi-target, High-grade Samples

- Channel samples: **15.40% Zn, 6.60% Pb, 4.66% Cu**, and **111.50 g/t Ag** over **1.05m**
- Grab samples: **40.8% Zn, 20.0% Pb, 8.36% Cu, 148.1 g/t Ag** and **2.28 g/t Au**
- Recent drill intercepts: **1.21 % Cu, 1.67 % Zn, 10.67 g/t Ag, 0.25 g/t Au** over **23.0m** (upper lens) + **2.45 % Cu, 1.70 % Zn, 92.20 g/t Ag, 5.89 g/t Au** over **0.66m** (lower lens)

De-risked Exploration, Proven Historic Success

Project hosts historic Pilley's Island mine, which **produced ~450,000 tonnes of ore** in the late 1800's, carries (non-NI 43-101 compliant¹) **reserves of 1.16Mt of 1.23% Cu**

Historic work mainly targeted shallow showings, **deeper and along strike potential is largely untested**; opportunity to consolidate 100+ years of geological data to establish a systematic **exploration program in 2026**

World-class Jurisdiction

Ranked #6 mining jurisdiction globally by Fraser Institute; straightforward, friendly and expedited permitting process

Multi-commodity Discovery Potential

Polymetallic revenue streams - copper, zinc, lead, gold, silver in a single asset. VMS deposits offer supply of multiple critical metals for electrification

De-risked, Exceptional Discovery Potential in Proven VMS Territory

FIRST ASSAYS CONFIRM SIGNIFICANT POLYMETALLIC MINERALIZATION

- First assays confirm significant polymetallic mineralization in both the upper and lower sulphide lenses of the Clifford Jones zone – both mineralized horizons remain open along strike and down dip
- The 2026 Phase One drilling Program was focused on evaluating the continuity of the mineralized system below known surface showings and along strike of the Clifford Jones zone
- PI-26-007 intersected 23.0m of 1.21 % Cu, 1.67 % Zn, 10.67 g/t Ag, 0.25 g/t Au (7.00 – 30.00m)**

Capitalization Structure

Capitalization Structure	
Basic Shares Outstanding	29,606,862
Warrants	9,789,372
Options	2,600,000
Fully Diluted Shares Outstanding	41,996,234
Current Share Price	\$0.50
Market Capitalization	\$14,803,431

HM Exploration Corp. Suite 400-570 Granville Street, Vancouver, BC V6C 3P1	
Listing Date	December 6, 2024
Exchange/Ticker	CSE: HM FSE: X5H OTCQB: HMEXF
Financial year-end	April 30
Transfer Agent	Endeavor Trust Corporation
Auditors	De Visser Gray LLP

Management Team

Nick Rodway, P. Geo
Chief Executive Officer
and Director

Mr. Rodway is a registered Professional Geologist. Mr. Rodway holds a Bachelor of Science in geology at Memorial University of Newfoundland and a Master's Degree at Queen's University in Earth and Energy Resource Leadership. He has spent over 10 years working with Canadian exploration companies. Nick specializes in project generation and project financing. He is also a Director on several other publicly traded exploration and mining companies.

Josh Vann
Chief Financial Officer and
Director

Joshua Vann brings extensive experience working in corporate development for publicly and privately listed companies in the natural resource sector. He is currently the VP of Business Development and Strategy at Core Assets Corp and previously worked in Equity Research at PI Financial on the Special Situations Team. Joshua also brings experience working in investment banking across a number of industries including healthcare, technology, and mining. Joshua holds a Bachelor of Commerce from McGill University with a Major in Finance

Nick Ryan, P. Geo
Chief Geologist

Nick Ryan is a registered Professional Geologist with over 10 years of exploration experience. Mr. Ryan has extensive experience in developing exploration projects from their beginning to infill/definition drilling. Mr. Ryan began his geology career working at the Coffee Gold Project in the Yukon – Canada and saw the transition from Kaminak Gold, to Goldcorp, to Newmont. Most recently, Mr. Ryan was with Exploits Discovery Corp. developing and managing their exploration programs in Newfoundland, Canada.

Christopher Huggins, BSc
Director

Mr. Huggins brings over 25 years of expertise in the mining, technology and capital equipment industries. Holding a BSc, honours, in geology, he began his career as a regional exploration geologist with Homestake, working on notable projects around Eskay Creek, Snip Mine, Stewart and Dease Lake camps. Over the past decade, he has delivered innovative capital equipment and financial solutions for surface and underground mining operations in the Northwest Territories and Yukon. Mr. Huggins has also managed global and national Caterpillar accounts at Finning. Currently, he is the CEO of Collective Metals Inc. (CSE: COMT).

Alan Lu
Director and Corporate
Secretary

Mr. Lu is the Corporate Secretary and a Director of the Company. Mr. Lu is a management executive with experience in accounting and finance roles in the automobile sector. Mr. Lu is the CEO and founder of J&A Rentals, an automobile rental company in Canada that has done over \$70M in revenue to date. Mr. Lu is chiefly responsible for financial management and strategic planning initiatives. Mr. Lu holds a Bachelor of Commerce Degree from the University of British Columbia.

Newfoundland, a World-Class Jurisdiction

Tier-1 Mining Jurisdiction

- Established mining ecosystem with strong government support
- Mining sector contributes ~32% to GDP
- Readily available, skilled labor force
- Friendly and transparent mine permitting
- Rated top 6 globally in 2024 by Fraser Institute
- Hydro power abundant throughout Newfoundland

Pilley's Island

- Project is accessible all year round by road, air and sea
- ~45min drive from Springdale via Hwy 380N
- Excellent infrastructure, hosts past producing mines
- ~150km from Pine Cove Mill and Port by way of major roads

Why VMS (Volcanogenic Massive Sulphide)?

Polymetallic Revenue Streams

- Copper, zinc, lead, gold, silver in a single asset
- Diversified exposure reduces reliance on a single commodity and provides a natural hedge against price volatility

High Grades & Strong Economics

- VMS deposits are known for compact footprints with robust grades in copper/zinc
- By-products (gold/silver) lower effective cash costs

Geological Predictability & Camp Scale

- Well-understood geological model; exploration is de-risked
- VMS deposits occur in clusters - one discovery often leads to several

Strategic Alignment

- Supplies critical metals for electrification (copper, zinc, silver)
- Governments and majors increasingly prioritizing securing supply, VMS systems are a priority given multiple commodities present

Mergers & Acquisition Potential

- Juniors advance discoveries, natural acquisition targets for mid-tiers/majors
- Track record of premium takeouts in established VMS camps (Noranda, Kidd Creek, Flin Flon, Iberian Pyrite Belt)

VMS Deposits are Polymetallic, High-grade and Understood Geologically

Pilley's Island Project: Summary

- Lewis Pilley's Project encompasses a total land area of 60.25km² and is located in Notre Dame Bay, Newfoundland - Canada.
- The Project has a long history of mining and exploration dating back to the late 1800's when the Pilley's Island Pyrite Company Ltd. produced approximately 450,000 tonnes of massive pyritic ore from the Pilley's Island Mine - Old Mines
- Reported (non-NI 43-101 compliant) reserves of 1.16Mt of 1.23% Cu*
- The Project is road accessible and situated ~25 kilometres east of the town of Springdale, approximately ~210 kilometres from the town of Gander and ~150 kilometres from the Pine Cove Mill and Port by way of major roads
- Hosts a cluster of Volcanogenic Massive Sulfide ("VMS") systems and prospects with demonstrated high-grade Zn-Pb-Cu-Ag intersections
- Mineralization is typical bimodal-felsic VMS, with both massive sulfide and sulfide-clast breccias
- The geological setting is directly analogous to the Buchans camp and the presence of sulfide-clast breccias is a strong vector toward proximal massive sulfide lenses

Geology

- Pilley's Island is located within the Notre Dame Subzone of the Dunnage Tectonostratigraphic Zone
- Most of the Project is underlain by Ordovician submarine volcanic rocks of the Roberts Arm Group which is regionally identified as part of a mature arc sequence referred to as the Buchans-Roberts Arm Belt that also hosts the historic Buchan's mine (after Dunning et. Al., 1987)
- Mineralization occurs as low grade (Spencer's Dock); medium grade (Old Mines); and high grade (3B-Zone/Clifford Jones)
- The deposits are of both sub-seafloor replacement and exhalative varieties. The deposits are often flanked by extensive chlorite, sericite, silica, K-feldspar and epidote alteration often observed in bimodal-felsic VMS systems
- The Spencer's Dock area displays sericite/silica alteration that generally increases in intensity near mineralized zones, while the 3B / Old Mine areas display sericite/silica alteration that is abundant but less widespread and is more intense when proximal to mineralized zones (after Kerr, 1996)

Mineralization

From north to south the Project is underlain by:

1. Lushes Bight Group – Lower Ordovician

- Composed of pillow basalts, pillow breccias, aquagene tuffs, massive basalt flows, flow breccias, and chlorite schist

2. Springdale Group – Silurian

- Terrestrial sequence of volcanics, pyroclastics, epiclastic to volcanoclastic sediments

3. Roberts Arm Group – Middle Ordovician

- The Roberts Arm Group, which hosts known mineralization, is complexly faulted and consists of an older tholeiitic terrane overlain by more calc-alkaline thrust slices. It is suggested that it represents an evolution from tholeiitic, back arc basalts to calc-alkaline intermediate to felsic volcanics deposited at about the time of continental collision in a neritic to littoral environment (after Bostock – 1988)

Bull Road – Clifford Jones Zone

BBF-27: 3.05m @ 0.93% Cu, 0.89% Pb, 3.51% Zn, 27.68 g/t Ag
 PI-83-01: 7.35m @ 0.66% Cu, 0.51% Pb, 3.41% Zn, 10.57 g/t Ag
 PI-83-07: 2.49m @ 0.70% Cu, 0.22% Pb, 0.74% Zn, 6.53 g/t Ag

Fragmental Showing

BBF-22: 5.33m @ 1.03% Cu, 0.19% Pb, 1.79% Zn, 6.24 g/t Ag, 0.31 g/t Au
 BBF-54: 5.49m @ 1.40% Cu, 0.19% Pb, 7.32% Zn, 20.53 g/t Ag
 BBF-58: 2.44m @ 1.10% Cu, 0.45% Pb, 3.40% Zn, 51.63 g/t Ag
 BBF-60: 5.33m @ 0.90% Cu, 0.06% Pb, 0.28% Zn, 4.98 g/t Ag

Hole 42

PI-89-05: 2.44m @ 0.94% Cu, 12.45% Zn, 4.11 g/t Au, 5.51% Pb

Spencer's Dock

PI-221-07: 0.47m @ 3.7% Zn, 0.29% Pb
 PI-221-12: 0.30m @ 1.64% Cu
 PI-221-13: 1.90m @ 0.66% Cu

3B Zone

PI-89-05: 2.74m @ 6.40% Cu, 0.46% Zn, 11.28g/t Ag, 0.85 g/t Au
 Including: 2.07m @ 7.79% Cu, 13.40g/t Ag, 1.05 g/t Au

Bull Road – Clifford Jones Zone / Fragmental Showing

- The showings at Bull Road are significant and suggest the potential for an ore-grade deposit source:
 - Re-sedimented, poly lithic breccia containing abundant high-grade Zn-Pb-Cu-Ag-Au sulfide clasts similar to the breccia ores at Buchan's
- The Bull Road showing describes a steeply dipping tabular volcanic breccia with high concentrations of copper, lead, zinc, and silver and features massive sulphide clasts
- Trenching conducted by Great Atlantic Resources Corp. and Unity Resources Inc. exposed significant sulfide mineralization trending northwest-southeast over a length of approximately 200 metres with mineralization varying in width between 1.0 – 7.0 metres
- The best results from channel sampling (over 1.05 metres) from the trench include:
 - 1.05 metres returned grades of 15.40% Zn, 6.60% Pb, 4.66% Cu, 111.50 g/t Ag
 - 0.70 metres returned grades of 17.30% Zn, 0.10% Pb, 2.97% Cu, 31.20 g/t Ag
 - The best results from bedrock grab samples from the trench returned up to 40.8% Zn, 20.0% Pb, 8.36% Cu, 148.1 g/t Ag, 2.28 g/t Au
- Recent exploration and sampling have provided updated data, indicating a continuation of substantial mineralization within the project area which shows stack sequences of the debris flow which warrants detailed remapping
- This would be completed by interpretation of existing geophysics and rock outcrops with extensive new trenching as to better explain location geology and structure
- Downhole EM, ground EM, optical and acoustic televiewer surveys will be executed imminently to help systematically plan for Phase Two drilling, testing the further extensions of the mineralized system

Mineralization from 2017 grab samples at Bull Road showing

Map showing distribution of diamond-drill holes in the Bumble Bee Bight area (modified from Thurlow, 2004). Also shown are the locations of the significant VMS occurrences.

Next Steps: The 2026 Exploration Program

Exploration Opportunities

- The intense mineralization visually observed in the first seven holes has now been confirmed by laboratory analysis, including high-grade **intervals grading up to 2.45% Cu, 5.89 g/t Au and 92.2 g/t Ag in the lower lens and very extensive intervals in the upper lens**
- Assays for holes PI-26-008 through PI-26-012 remain pending (**see Press Releases dated June 29 & July 7, 2026, for information on what was observed in these drill holes**)
- Downhole EM, ground EM, optical and acoustic televiewer surveys are being executed imminently to obtain a better understanding of the upper and lower lenses
- Phase Two drilling is currently being planned in the attempt to extend the mineralization – program is set to begin in late 2026
